

Cisco Nexus 1000V Series Switches

Product Overview

Cisco Nexus™ 1000V Series Switches are virtual machine access switches that are an intelligent software switch implementation for VMware vSphere environments running the Cisco® NX-OS operating system. Operating inside the VMware ESX hypervisor, the Cisco Nexus 1000V Series supports Cisco VN-Link server virtualization technology to provide:

- Policy-based virtual machine (VM) connectivity
- Mobile VM security and network policy, and
- Non-disruptive operational model for your server virtualization, and networking teams

When server virtualization is deployed in the data center, virtual servers typically are not managed the same way as physical servers. Server virtualization is treated as a special deployment, leading to longer deployment time, with a greater degree of coordination among server, network, storage, and security administrators. With the Cisco Nexus 1000V Series, you can have a consistent networking feature set and provisioning process all the way from the VM access layer to the core of the data center network infrastructure. Virtual servers can now leverage the same network configuration, security policy, diagnostic tools, and operational models as their physical server counterparts attached to dedicated physical network ports. Virtualization administrators can access predefined network policy that follows mobile virtual machines to ensure proper connectivity saving valuable time to focus on virtual machine administration. This comprehensive set of capabilities helps you to deploy server virtualization faster and realize its benefits sooner.

Developed in close collaboration with VMware, the Cisco Nexus 1000V Series is certified by VMware to be compatible with VMware vSphere, vCenter, ESX, and ESXi, and with many other VMware vSphere features. You can use the Cisco Nexus 1000V Series to manage your virtual machine connectivity with confidence in the integrity of the server virtualization infrastructure.

Product Architecture

The Cisco Nexus 1000V Series Switch has two major components: the Virtual Ethernet Module (VEM), executes inside the hypervisor and the external Virtual Supervisor Module (VSM) that manages the VEMs (Figure 1).

Figure 1. Cisco Nexus 1000V Series Architecture

Virtual Ethernet Module

The Cisco Nexus 1000V Virtual Ethernet Module (VEM) executes as part of the VMware ESX or ESXi kernel and replaces the VMware Virtual Switch functionality. The VEM leverages the VMware vNetwork Distributed Switch (vDS) API, which was developed jointly by Cisco and VMware, to provide advanced networking capability to virtual machines. This level of integration ensures that the Cisco Nexus 1000V is fully aware of all server virtualization events, such as VMware VMotion and Distributed Resource Scheduler (DRS). The VEM takes configuration information from the Virtual Supervisor Module and performs layer 2 switching and advanced networking functions:

- Port Channels
- Quality of service (QoS)
- Security: Private VLAN, access control lists, port security
- Monitoring: NetFlow, Switch Port Analyzer (SPAN), Encapsulated Remote SPAN (ERSPAN)

In the event of loss of communication with the Virtual Supervisor Module, the VEM has Nonstop Forwarding capability to continue to switch traffic based on last known configuration. In short, the VEM provides advanced switching with data-center reliability for the server virtualization environment.

Virtual Supervisor Module

The Cisco Nexus 1000V Series Virtual Supervisor Module (VSM) controls multiple VEMs as one logical modular switch. Instead of physical line card modules, the VSM supports multiple VEMs running in software inside of the physical servers. Configuration is performed through the VSM and is automatically propagated to the VEMs. Instead of configuring soft switches inside the hypervisor on a host-by-host basis, administrators can define configurations for immediate use on all VEMs being managed by the Virtual Supervisor Module from a single interface.

By using the capabilities of Cisco NX-OS, the Cisco Nexus 1000V Series provides these benefits:

- **Flexibility and Scalability:** Port Profiles, a new NX-OS feature, provides configuration of ports by category enabling the solution to scale to a large number of ports. Common software can run all areas of the data center network, including LAN and storage area networks.
- **High Availability:** Synchronized, redundant Virtual Supervisor Modules enable rapid, stateful failover and ensure an always available virtual machine network.
- **Manageability:** The Cisco Nexus 1000V Series can be accessed through the Cisco command-line interface (CLI), Simple Network Management Protocol (SNMP), and CiscoWorks LAN Management Solution (LMS).

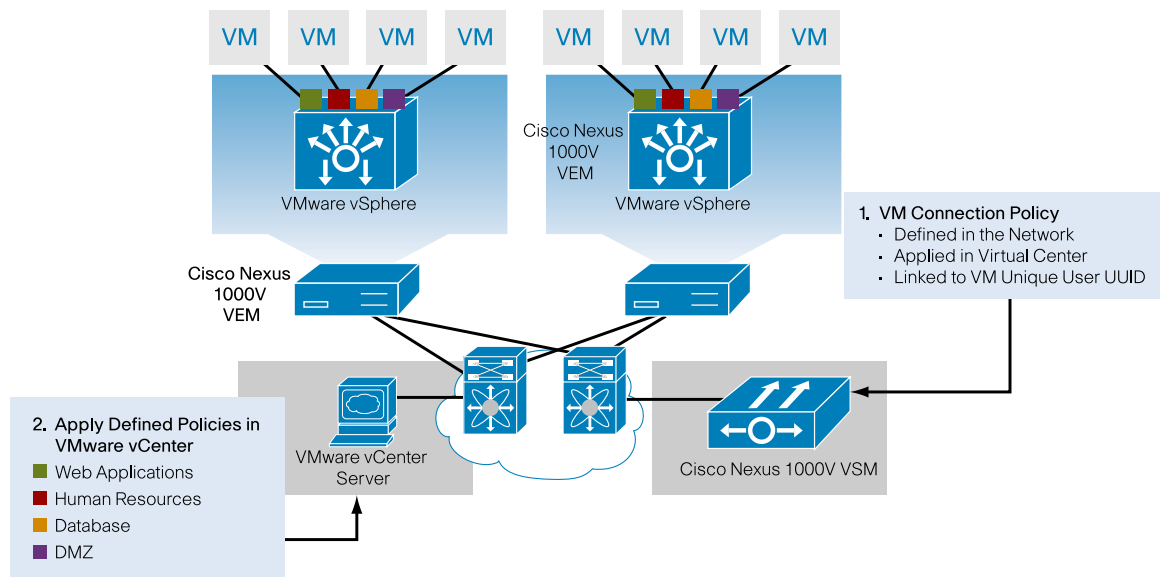

The Virtual Supervisor Module is also integrated with VMware vCenter Server so that the virtualization administrator can take advantage of the network configuration in the Cisco Nexus 1000V.

Features and Benefits

The Cisco Nexus 1000V Series provides a common management model for both physical and virtual network infrastructures through Cisco VN-Link technology that includes policy-based VM connectivity, mobility of VM security and network properties, and a non-disruptive operational model.

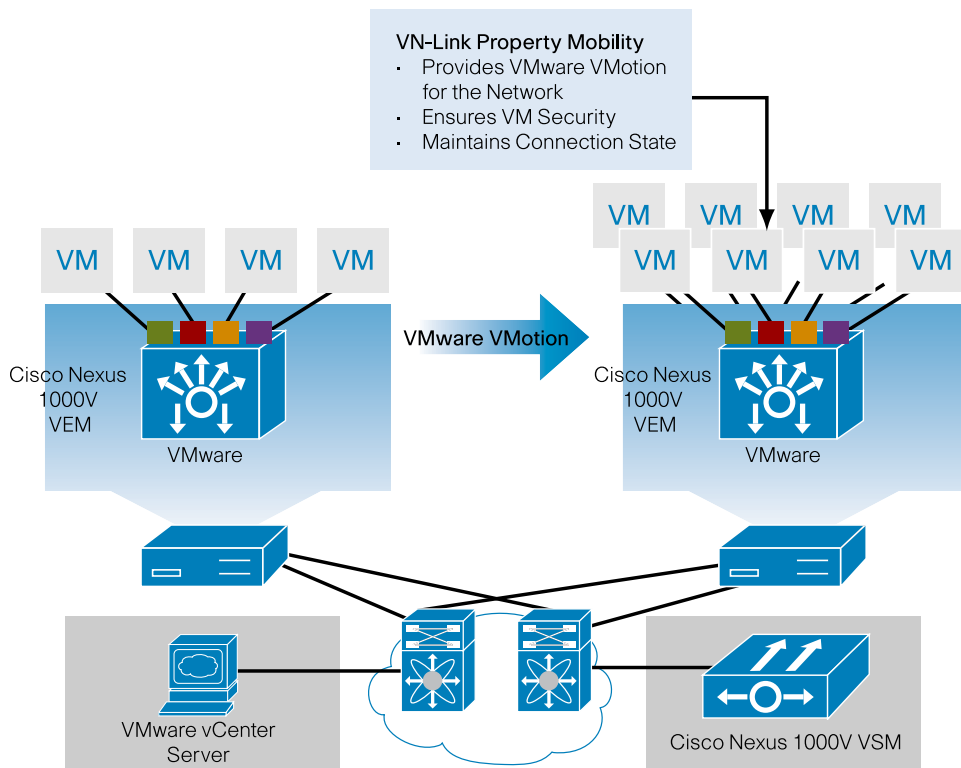

Policy-Based VM Connectivity: To complement the ease of creating and provisioning VMs, the Cisco Nexus 1000V includes the Port Profile feature to address the dynamic nature of server virtualization from the network's perspective (Figure 2). Port Profiles enable you to define VM network policies for different types or classes of VMs from the Cisco Nexus 1000V VSM, then apply the profiles to individual VM virtual NICs through VMware's vCenter GUI for transparent provisioning of network resources. Port Profiles are a scalable mechanism to configure networks with large numbers of VMs.

Figure 2. Policy-Based VM Connectivity

Mobility of VM Security and Network Properties: Network and security policies defined in the Port Profile follow the VM throughout its lifecycle whether it is being migrated from one server to another (Figure 3), suspended, hibernated, or restarted. In addition to migrating the policy, the Cisco Nexus 1000V Virtual Supervisor Module also moves the VM's network state, such as the port counters and flow statistics. VMs participating in traffic monitoring activities, such as Cisco NetFlow or ERSPAN, can continue these activities uninterrupted by VMotion operations. When a specific Port Profile is updated, the Cisco Nexus 1000V automatically provides live updates to all of the virtual ports using that same Port Profile. With the ability to migrate network and security policies through VMotion, regulatory compliance is much easier to enforce with the Cisco Nexus 1000V, because the security policy is defined in the same way as physical servers and constantly enforced by the switch.

Figure 3. Mobility of Network and Security Properties

Non-Disruptive Operational Model: Because of its close integration with VMware vCenter Server, the Cisco Nexus 1000V allows virtualization administrators to continue using VMware tools to provision VMs. At the same time, network administrators can provision and operate the VM network the same way they do the physical network using Cisco CLI and SNMP along with tools such as ERSPAN and NetFlow (Figure 4). While both teams work independently, using familiar tools, the Cisco Nexus 1000V enforces consistent configuration and policy throughout the server virtualization environment. This level of integration lowers the cost of ownership while supporting various organizational boundaries among server, network, security, and storage teams.

Inside VMware vCenter Server, VMs are configured as before. Instead of defining network configuration in vCenter Server, Port Profiles defined on the Cisco Nexus 1000V Virtual Supervisor Module are displayed by vCenter as Port Groups. Virtualization administrators can take advantage of preconfigured Port Groups and focus on VM management, while network administrators can use Port Profiles to apply policy for a large number of ports at the same time. Together, both teams can deploy server virtualization more efficiently and with lower operational cost.

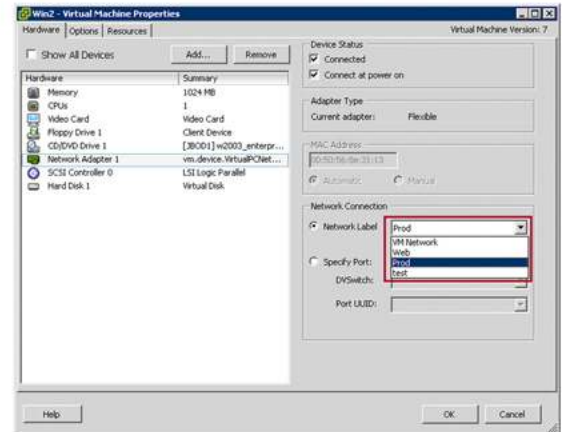

Figure 4. Nondisruptive Operational Model

Network Administrator View of Network Policy

Virtualization Administrator Applying Network Policy

Enhanced Deployment Scenarios

Optimize Server Bandwidth for I/O Intensive Applications

Today, network interface are often dedicated to a particular type of traffic, such as VMware Console or VMotion. With the Nexus 1000V, all the network interface cards on the server can be treated as a single logical channel with quality of service attached to each type of traffic. Consequently, the bandwidth to the server can be more efficiently utilized and virtualize network intensive applications.

Easier Security Audits with Consistent Security Policy

Security audits on virtual machines are usually more difficult since they are secured in differently than physical servers. Since the Cisco Nexus 1000V provides persistent security policy to mobile virtual machines, security audits are similar to that of physical servers, thus easing security audits.

Virtual Machine as Basic Building Block of Data Center

Because of the Cisco Nexus 1000V Series, virtual machines are treated in the same way as physical servers in 1) security policy, 2) monitoring and troubleshooting, and 3) operational model between network and server administrators, virtual machines can finally be a true basic building block of the data center. These operational efficiencies lead to greater scaling of server virtualization deployments with lowered operation expenditure.

Cisco NX-OS Software Overview

Cisco NX-OS Software is a data center–class operating system built with modularity, resiliency, and serviceability at its foundation. Based on the industry-proven Cisco MDS 9000 SAN-OS Software, Cisco NX-OS Software helps ensure continuous availability and sets the standard for mission-critical data center environments. The self-healing and highly modular design of Cisco NXOS Software makes zero-impact operations a reality and enables exceptional operational flexibility. Focused on the requirements of the data center, Cisco NX-OS Software provides a robust and rich feature set that fulfills the Ethernet and storage networking requirements of present and future data centers. With a CLI like that of Cisco IOS® Software, Cisco NX-OS Software provides state-of-the-art implementations of relevant networking standards as well as a variety of true data center–class Cisco innovations.

Cisco NX-OS Software Features and Benefits

- **Software compatibility:** Cisco NX-OS Software Release 4.0 interoperates with Cisco products running any variant of the Cisco IOS Software operating system. Cisco NX-OS Software Release 4.0 also interoperates with any networking OS that conforms to the networking standards listed as supported in this data sheet.
- **Common software throughout the data center:** Cisco NX-OS Software simplifies the data center operating environment and provides a unified OS designed to run all areas of the data center network, including the LAN, SAN, and Layer 4 to 7 network services.
- **Modular software design:** Cisco NX-OS Software modular processes are instantiated on demand, each in a separate protected memory space. Thus, processes are started and system resources allocated only when a feature is enabled. The modular processes are governed by a real-time preemptive scheduler that helps ensure the timely processing of critical functions.
- **Quick development of enhancements and problem fixes:** The modularity of Cisco NX-OS Software allows new features, enhancements, and problem fixes to be integrated into the software quickly. Thus, modular fixes can be developed, tested, and delivered in a short time span.
- **SNMP:** Cisco NX-OS complies with SNMPv1, v2, and v3. A rich collection of MIBs is supported.
- **Role-based access control (RBAC):** With RBAC, Cisco NX-OS Software enables administrators to limit access to switch operations by assigning roles to users. Administrators can customize and restrict access to the users who require it.

Product Specifications

VMware Product Compatibility

The Cisco Nexus 1000V Series is VMware Ready Certified to be compatible with VMware vSphere as a vNetwork Distributed Switch with support for VMware ESX and ESXi hypervisors and integration with VMware vCenter Server.

VMware vSphere Feature Compatibility

The Cisco Nexus 1000V Series is supported with the following VMware vSphere features:

- VMware VMotion
- VMware Distributed Resource Scheduler (DRS)
- VMware High Availability (HA)
- VMware Storage VMotion
- VMware Fault Tolerance (FT)
- VMware Update Manager

Maximum Supported Configurations

- 64 VMware ESX or ESXi hosts per VSM
- 2048 virtual Ethernet ports per VMware vDS, with 216 virtual Ethernet ports per physical host
- 512 active VLANs
- 32 physical NICs per physical host
- 256 port channels per VMware vDS, with 8 PortChannels per physical host

Layer 2 Features

- Layer 2 switch ports and VLAN trunks
- IEEE 802.1Q VLAN encapsulation

- Link Aggregation Control Protocol (LACP): IEEE 802.3ad
- Advanced Port Channel hashing based on Layer 2, 3, and 4 information
 - Source MAC address (default)
 - Virtual port ID
 - Destination IP address and Layer 4 port
 - Destination IP address, Layer 4 port, and VLAN
 - Destination IP address and VLAN
 - Destination MAC address
 - Destination Layer 4 port
 - Source and destination IP address and Layer 4 port
 - Source and destination IP address, Layer 4 port, and VLAN
 - Source and destination IP address and VLAN
 - Source and destination MAC address
 - Source and destination Layer 4 port
 - Source IP address and Layer 4 port
 - Source IP address, Layer 4 port, and VLAN
 - Source IP address and VLAN
 - Source MAC address
 - Source Layer 4 port
 - VLAN only
- Virtual Port Channel Host Mode
- Private VLANs with Promiscuous, Isolated, and Community ports
- Private VLAN on trunks
- Internet Group Management Protocol (IGMP) Snooping Versions 1, 2, and 3
- Jumbo frame support, up to 9216 bytes
- Integrated loop prevention with bridge protocol data unit (BDPU) filter without running Spanning Tree Protocol

QoS Including Virtual Machine Granularity

- Classification
 - Access group (ACL)
 - IEEE 802.1p CoS
 - IP Type of Service: IP precedence or DSCP (RFC 2474)
 - User Datagram Protocol (UDP) ports
 - Packet length
- Marking
 - Two Rate Three Color Marker (RFC 2698)
 - IEEE 802.1p CoS marking
 - IP Type of Service: IP precedence or DSCP (RFC 2474)
- Traffic policing (transmit- and receive-rate limiting)
- Modular QoS CLI (MQC) compliance

Security

- Ingress and egress ACLs on Ethernet and virtual Ethernet ports
- Standard and extended Layer 2 ACLs:
 - MAC address and IPv4
 - Source MAC address
 - Destination MAC address
 - EtherType
 - VLAN
 - CoS
- Standard and extended Layer 3 to 4 ACLs:
 - Source IP
 - Destination IP
 - DSCP
 - Precedence
 - Protocol (TCP, UDP, Internet Control Message Protocol [ICMP], and IGMP)
 - Source port
 - Destination port
 - TCP flags
 - ICMP and IGMP type
 - ICMP code
- Port-based ACLs (PACLs)
- Named ACLs
- ACL statistics
- Port security

High Availability

- **Stateful supervisor failover:** Synchronized redundant supervisors are always ready for failover while maintaining a consistent and reliable state.
- **Nonstop Forwarding:** Continued forwarding despite loss of communication between VSM and VEM.
- **Process survivability:** Critical processes run independently for ease of isolation, fault containment, and upgrading. Processes can restart independently in milliseconds without losing state information, affecting data forwarding, or affecting adjacent devices or services.

Management

- Cisco NX-OS Software CLI console
- SPAN: Local port mirroring of a physical interface, port channel, VLAN
- Enhanced Remote SPAN (ERSPAN): Remote port mirroring
- NetFlow Version 9 with NetFlow Data Export (NDE)
- Cisco Discovery Protocol Versions 1 and 2
- SNMP (read) v1, v2, and v3
- Enhanced SNMP MIB support

- SSH v2
- Telnet
- Authentication, authorization, and accounting (AAA)
- TACACS+
- RADIUS
- Syslog
- Role based access control (RBAC)
- Ingress and egress packet counters per interface
- Network Time Protocol (NTP) RFC 1305
- Domain Name Services (DNS) for management interfaces
- CiscoWorks LMS v3.1, v3.0.1, and v2.6 with Service Pack 1 (SP1)

SNMP MIBs

- Generic MIBs
 - CISCO-TC
 - SNMPv2-MIB
 - SNMP-COMMUNITY-MIB
 - SNMP-FRAMEWORK-MIB
 - SNMP-NOTIFICATION-MIB
 - SNMP-TARGET-MIB
- Configuration MIBs
 - ENTITY-MIB
 - IF-MIB
 - CISCO-ENTITY-EXT-MIB
 - CISCO-ENTITY-FRU-CONTROL-MIB
 - CISCO-FLASH-MIB
 - CISCO-IMAGE-MIB
 - CISCO-CONFIG-COPY-MIB
 - CISCO-ENTITY-VENDORTYPE-OID-MIB
 - ETHERLIKE-MIB
 - CISCO-LAG-MIB
 - MIB-II
- Monitoring MIBs
 - NOTIFICATION-LOG-MIB
 - CISCO-PROCESS-MIB
- Security MIBs
 - CISCO-AAA-SERVER-MIB
 - CISCO-COMMON-MGMT-MIB
 - CISCO-PRIVATE-VLAN-MIB
- Miscellaneous MIBs

- CISCO-CDP-MIB
- CISCO-LICENSE-MGR-MIB
- CISCO-ENTITY-ASSET-MIB

Supported Standards

Table 1 presents IEEE compliance information, and Table 2 presents RFC compliance information.

Table 1. IEEE Compliance

Standard	Description
IEEE 802.1p	CoS tagging for Ethernet frames
IEEE 802.1Q	VLAN tagging
IEEE 802.3	Ethernet
IEEE 802.3ad	Link Aggregation Control Protocol (LACP)

Table 2. RFC Compliance

Standard	Description
IP Services	
RFC 768	User Data Protocol (UDP)
RFC 791	IP
RFC 792	Internet Control Message Protocol (ICMP)
RFC 793	TCP
RFC 826	Address Resolution Protocol (ARP)
RFC 854	Telnet
RFC 894	IP over Ethernet
RFC 1305	Network Time Protocol Version 3
RFC 1492	TACACS+
RFC 1591	Domain Name System (DNS) Client
RFC 2068	HTTP server
RFC 2138	RADIUS authentication
RFC 2139	RADIUS accounting
IP Multicast	
RFC 1112	IGMPv1 snooping
RFC 2236	IGMPv2 snooping
RFC 3376	IGMPv3 snooping
Quality of Service	
RFC 2474	DSCP marking
RFC 2698	Two Rate Three Color Marker

System Requirements

- VMware vSphere 4.0 or later with vNetwork Distributed Switch
- Cisco Nexus 1000V Series VSM:
 - VSM can be deployed as a virtual machine on VMware ESX or ESXi 3.5U2 or higher or ESX or ESXi 4.0
 - Hard disk: 3 GB
 - RAM: 2 GB
 - 1 virtual CPU at 1.5 GHz

- Cisco Nexus 1000V Series VEM
 - VMware ESX or ESXi 4.0
 - Hard disk space: 6.5 MB
 - RAM: 150 MB
- Number of VLANs connecting VSM and VEM
 - Minimum: 1
 - Recommended: 3
- Server on VMware Hardware Compatibility List (<http://www.vmware.com/go/hcl>)
- Compatible with any upstream physical switches, including all Cisco Nexus and Catalyst switches as well as Ethernet switches from other vendors

Licensing and Ordering Information

The Cisco Nexus 1000V Series is licensed based on the number of physical CPUs on the server on which the VEM is running. Table 3 presents ordering formation for the Cisco Nexus 1000V Series.

Table 3. Cisco Nexus 1000V Series Ordering Information

Part Number	Description
N1K-VSMK9-404S1=	Nexus 1000V VSM Download
N1K-VSMK9-404S1-P=	Nexus 1000V VSM on Physical Media
N1K-VLCPU-01=	Nexus 1000V Paper CPU License Qty 1-Pack

L-N1K-VLCPU-32=	Nexus 1000V eDelivery CPU License Qty 32-Pack

Warranty

The Cisco Nexus 1000V Series has a 90-day limited software warranty. For more information about the Cisco Nexus 1000V Series warranty, see http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html.

Service and Support

Cisco Software Application Support plus Upgrades (SASU) is a comprehensive support service that helps you to maintain and enhance the availability, security, and performance of your business-critical applications. Cisco SASU includes the following resources:

- **Software updates and upgrades:** The Cisco SASU service provides timely, uninterrupted access to software updates and upgrades to help you keep existing systems stable and network release levels current. Update releases, including major upgrade releases that may include significant architectural changes and new capabilities for your licensed feature set, are available by software download from Cisco.com or by CD-ROM shipment.
- **Cisco Technical Assistance Center (TAC):** Cisco TAC engineers provide accurate, rapid diagnosis and resolution of software application problems to help you reduce outages and performance degradation. These specialized software application experts are trained to support the Cisco Nexus 1000V Series. Their expertise is available to you 24 hours a day, 365 days a year, by telephone, fax, email, or the Internet.

-
- **Online support:** Cisco SASU provides access to a wide range of online tools and communities to help you resolve problems quickly, support business continuity, and improve competitiveness.
